Legacy

The University of Akron
Strategy for Legacy Applications

A. Continue working to retire legacy applications where it makes sense

B. Move remaining legacy to a service provider once PeopleSoft is off the mainframe; Late 2008?

C. Prioritize remaining work
   1. Handle legacy impacted by V9 or platform upgrade projects (e.g. interfaces, Easytrieve)
   2. Do not conflict with resources already working on higher priority projects such as V9 Upgrade
   3. Eliminate applications that drive up the cost of outsourcing

D. Hire help where needed; no application knowledge required
   1. Academic history
   2. Push historical data from DB2 to Oracle
