| Description | I would like to obtain a permit so that the U of A Herpetology class can observe, capture, and then release reptiles and amphibians at the nature preserve. I would also like to be able to set turtle traps. Traps will be set in the evening and checked the following day during class. All captured turtles will be released after observation. The collection of reptiles and amphibians will help the students with their identification skills and will allow students to observe environments and behaviors. We will report species and numbers of turtles captured. Minimal disturbance will be caused by the activities. |
